

100% FREE — NO CARD, NO CATCH, NO UPSELL INSIDE

The AI Leverage Masterclass

The complete system for turning AI into your **content team**, **copywriter** and **research assistant** — the same material creators charge hundreds for, compressed into one booklet you can finish this weekend.

~~\$500~~

FREE

THE FULL COURSE ·
NOTHING HELD BACK
FOR A PAID TIER

Let's address it before you even ask: why would anyone give away a \$500 masterclass for free?

Simple. The best marketing I can do is to actually help you. If this booklet saves you ten hours a week or helps you land your first AI-assisted client, you'll remember where you learned it — and you'll stick around. That's the whole trade. There is no locked chapter, no "the real secrets are in the paid tier." **This is the full course.**

The \$500 number isn't decoration either. Courses covering exactly this material — prompt frameworks, a content repurposing engine, monetization playbooks — routinely sell for \$300–\$800. I've priced each module honestly on the next page so you can see where the value sits.

One promise from me, one from you. Mine: everything in here is practical — you can use every prompt today, with free AI tools. Yours: don't just read it. **Pick one module and act on it within 24 hours.** Information you don't use is worth exactly \$0, no matter what the cover says.

Let's get you leveraged. ⚡

How to use this booklet

1. **Skim all six modules once** (20 minutes) so you know what's here.
2. **Steal the prompts in Module 3** — they're written to copy, paste and fill in.
3. **Run the 30-day plan** at the back. It sequences everything for you.

What's inside — and what it's worth

Each module is priced against what comparable paid courses and workshops charge for the same material. Add it up, then look at what you paid.

01	Think in leverage The mindset shift that separates people who play with AI from people who profit from it.	\$45
02	The C.R.A.F.T. prompt framework A five-part formula that upgrades any prompt from vague to professional-grade.	\$95
03	The prompt vault 10 copy-paste prompts for content, copy, research and strategy — each replacing paid work.	\$150
04	The 7-day content engine Turn one idea into a full week of posts, emails and videos — in about 90 minutes.	\$90
05	Five ways to get paid The realistic monetization paths for AI skills in 2026, with the exact first step for each.	\$75
06	The lean toolstack + 30-day plan The short list of tools worth your time, and a week-by-week execution calendar.	\$45

TOTAL VALUE

~~\$500~~

YOU PAY

\$0

01 Think in leverage

• \$45 value

Most people use AI like a search engine: ask a question, get an answer, move on. The people getting real results use it like **a talented employee** — briefed properly, given real work, and reviewed like a manager would.

The oracle trap vs. the delegation mindset

Ask AI "what should I post?" and you get generic mush — that's the **oracle trap**: treating AI as a magic answer machine. Instead, **delegate**: hand over a defined task, with context, standards and an example of what "good" looks like. The quality of what you get back is a mirror of the brief you gave.

The 80/20 of AI in one sentence

80% of AI's value comes from 20% of use cases: **drafting, repurposing, summarizing, researching, and critiquing your work**. Master those five before chasing anything shinier.

Exercise: the delegation audit (10 minutes)

Write down everything you did for your business or content last week. Then mark each task:

- **A — AI does it, I review.** First drafts, captions, outlines, research summaries, repurposing.
- **B — AI assists, I drive.** Strategy, offers, anything with your personal story or taste.
- **C — Only me.** Relationships, appearing on camera, final judgement calls.

Most people discover 40–60% of their week is sitting in column A. That's your recovered time — and everything in the next five modules is about spending it well.

Rule to keep

AI produces the **first 80%**. You produce the **final 20%** — the taste, the stories, the opinions only you have. Never ship the raw output; that final pass is where your brand lives.

02 The C.R.A.F.T. prompt framework

• \$95 value

Every high-performing prompt in this booklet is built from five parts. Learn the formula once and you can write prompts for **anything** — no cheat sheet needed.

C	Context	What's the situation, who's the audience, what do they care about? "I run a fitness page for busy professionals over 30..."
R	Role	Who should the AI act as? A role loads expertise and standards. "Act as a direct-response copywriter who writes conversational hooks..."
A	Action	The specific task, with numbers. Vague asks get vague answers. "Write 10 hooks under 12 words each for this topic..."
F	Format	Exactly how the output should be structured. "Numbered list. For each: the hook + one line on why it works."
T	Tone	The voice. Paste a sample of your writing for best results. "Confident, warm, zero corporate jargon. Match this sample: [...]"

BEFORE — THE ORACLE TRAP

"Give me some Instagram post ideas about fitness."

Result: the same 10 generic ideas everyone else gets.

AFTER — C.R.A.F.T. APPLIED

"I coach desk workers over 30 who have 30 min/day [**C**]. Act as a fitness content strategist [**R**]. Give me 10 reel ideas that challenge a common myth [**A**], as a table: myth → truth → hook line [**F**]. Tone: blunt but encouraging [**T**]."

The follow-up multiplier

The first output is never the final output. Push back like you would with a junior teammate: "Make #3 punchier." "Rewrite in my voice — sample attached." "Now critique your own answer and fix the weakest part." Two follow-ups typically double the quality.

03 The prompt vault

• \$150 value

Ten battle-ready prompts. Copy, replace the **[bracketed parts]**, paste into your AI tool of choice. Each tag shows the paid work it replaces.

P1 The 30-day content calendar

• replaces a \$200 strategy session

Act as a content strategist for **[niche]**. My audience struggles with **[top 3 pain points]**. Build a 30-day content calendar: for each day give topic, format (reel / carousel / story / text), a hook under 12 words, and the single takeaway. Mix 60% value, 30% connection, 10% promotion of **[your offer]**. Output as a table.

P2 The hook machine

• replaces a \$150 copywriter brief

Act as a short-form copywriter. Topic: **[topic]**. Audience: **[audience]**. Write 15 scroll-stopping hooks under 12 words: 5 curiosity-based, 5 contrarian, 5 outcome-based. Then mark your top 3 and explain in one line each why they'll stop the scroll.

P3 The carousel scripter

• replaces a \$100 design brief

Turn this idea into an 8-slide Instagram carousel: **[idea or paste a draft]**. Slide 1: bold hook. Slides 2-7: one point each, max 25 words per slide, each slide creating a reason to swipe. Slide 8: recap + tell readers to **[follow / save / comment a keyword]**. Give me slide-by-slide text plus a one-line visual direction per slide.

P4 The repurposing engine

• replaces a \$250/mo content assistant

Here is one piece of long-form content: **[paste video script, newsletter or blog post]**. Repurpose it into: 3 reel scripts (30-45s, spoken-word style with hook + payoff), 1 carousel outline, 5 tweet-length posts, and 1 email to my list. Keep my exact phrases where they're strong; flag anything that needs a personal story from me with **[STORY]**.

P5 The voice cloner

• replaces a \$120 brand-voice workshop

Analyze these 3 samples of my writing: **[paste samples]**. Produce a "voice guide": tone in 5 adjectives, sentence rhythm, words/phrases I overuse, words I'd never use, and 3 rules for writing as me. End with a 100-word sample paragraph written in my voice about **[topic]** so I can verify the match.

03 The prompt vault, continued

P6 The market X-ray

• replaces \$300 of market research

Act as a market researcher for [niche]. Map: the 5 biggest problems my audience says they have (in their own words), the 5 problems they actually have underneath, objections that stop them buying, and 3 underserved sub-niches. For each sub-niche: one content angle and one offer idea. Be specific.

P7 The offer sharpener

• replaces a \$200 positioning consult

Here's my offer: [describe offer + price]. Audience: [audience]. Rewrite the positioning 3 ways: (1) outcome-first, (2) enemy-first (against the old way), (3) speed/ease-first. For each: a one-sentence pitch, a 50-word description, and the strongest objection with a one-line rebuttal.

P8 The 5-email welcome sequence

• replaces a \$350 email copy package

Write a 5-email welcome sequence for people who downloaded [your freebie]. Email 1: deliver + quick win. 2: my story – insert [STORY] markers where I should add personal detail. 3: the big mistake my audience makes. 4: case study or method walkthrough. 5: soft pitch for [offer]. Subject lines under 6 words; emails under 200 words.

P9 The talking-head script

• replaces a \$150 scriptwriter

Write a 60-second talking-head video script about [topic] for [audience]. Structure: hook (first 3 seconds, no intro, no "hey guys"), stakes (why this matters now), 3 rapid points, payoff, and a CTA to [action]. Write it as spoken – short sentences, contractions. Add [PAUSE] and [B-ROLL: ...] markers.

P10 The brutal editor

• replaces a \$100 content audit

Act as a brutally honest editor who optimizes for attention and clarity. Here's my draft: [paste draft]. Score it /10 on hook, flow, specificity, and CTA. List the 3 weakest lines and rewrite each. Cut 20% of the words without losing meaning. Then show the final improved version.

Make the vault yours: these ten are templates, not scripture. Each time a prompt works, save your filled-in version to a note called "**Prompt Vault**" – within a month you'll own a library tuned to your niche.

04 The 7-day content engine

• \$99 value

One idea in, a full week of content out — in roughly **90 minutes of your time**. This is the exact assembly line, using prompts P1–P4 and P9 from the vault.

DAY	YOU PUBLISH	HOW IT GETS MADE
Sun	Nothing — build day	Pick one pillar idea (a question your audience keeps asking). Record yourself talking about it for 5 minutes, or write 300 messy words. This raw material is the engine's fuel — it's where <i>you</i> live in the content.
Mon	Talking-head reel	Feed your raw material into P9 . Film in one take. Done is better than cinematic.
Tue	Carousel	Run P3 on the same material. Design from a template you reuse weekly — never from scratch.
Wed	Story sequence	Ask AI for a 4-frame story arc: poll → insight → example → question box. Two minutes of tapping.
Thu	Second reel, new angle	From your P4 repurposing output — pick the contrarian angle so it doesn't feel repeated.
Fri	Text post + email	P4 already wrote both. Add one personal line at the top; that line is why people read yours.
Sat	Engagement only	No posting. Reply to every comment and DM. AI can draft replies — the relationship part is yours.

Why this works

Every piece comes from **one** idea, so your message compounds instead of scattering. Repetition across formats is not lazy — it's how audiences actually learn who you are.

The 90-minute rule

Batch everything on Sunday: run the prompts, film both reels, schedule the week. If it takes over 90 minutes, your pillar idea is too complicated — shrink it.

05 Five ways to get paid

\$75 value

AI skills only turn into income when they're attached to an **outcome someone already pays for**. These are the five realistic paths — ordered from fastest cash to biggest ceiling.

1 AI-boosted freelancing

Sell a service you can already do passably — captions, emails, product descriptions, research decks — and use the vault to deliver it 5× faster. Clients pay for the outcome; the speed is your margin.

→ FIRST STEP: use P2 + P10 to build 3 portfolio samples tonight, then pitch 5 small businesses this week.

2 The content-management retainer

Run Module 4's engine for a busy founder or local business: they record 5 messy minutes, you deliver their whole week of content. Recurring revenue, and one system serves many clients.

→ FIRST STEP: offer the first week free to one business you already follow; convert to monthly after they see it.

3 Digital products

Package what you know — templates, guides, mini-courses, notion systems. AI collapses production from months to days (P6 finds the gap, P7 positions it, P8 sells it). Made once, sold repeatedly.

→ FIRST STEP: run P6 on your niche today and shortlist one product idea under \$50.

4 Audience-first (this booklet's own model)

Give away genuinely valuable content free, grow trust at scale, monetize later with offers, affiliates or sponsorship. Slowest path, biggest compounding — and yes, a free "\$500" PDF is a classic move in it.

→ FIRST STEP: ship the 7-day engine for 4 straight weeks before judging any numbers.

5 Teaching AI itself

Every industry is scrambling to adopt AI. If you're two chapters ahead of a specific audience — estate agents, coaches, restaurants — you can run paid workshops on exactly what you've learned here.

→ FIRST STEP: post one "here's how I use AI for [niche task]" tutorial and watch who asks questions.

Honesty checkpoint: none of these are passive or guaranteed. They're real work made dramatically faster. Anyone promising "\$10k/month with 3 prompts" is selling you the dream instead of the skill — you now have the skill.

06 The lean toolstack

• \$45 value

Tool-hopping is procrastination in a productivity costume. You need **one tool per job**, and almost everything here has a free tier that's enough to start.

THE JOB	REACH FOR	NOTES
Thinking, writing, prompts	Claude or ChatGPT	Your daily driver — every prompt in this booklet works in either. Pick one, learn it deeply.
Design & carousels	Canva	Build one carousel template, reuse it forever. Its AI features handle resizing and variations.
Video editing	CapCut	Auto-captions alone justify it. Templates make edits a 10-minute job.
Images	Midjourney or built-in generators	Nice-to-have, not need-to-have. Faces and personality beat AI art for engagement.
Organization	Notion (or any notes app)	Home of your Prompt Vault, voice guide and content calendar. The system matters, not the app.
Scheduling	Meta Business Suite / Buffer	Batch on Sunday, schedule the week, protect your mornings.
Automation (later)	Zapier or Make	Only once something works manually. Automating a broken process just breaks it faster.

The one-month rule

No new tools for your first 30 days. Every hour comparing apps is an hour not building the engine. The stack above — mostly free — is enough to execute every module in this booklet.

Total monthly cost to start

Free tiers of a chat AI + Canva + CapCut + a notes app = **\$0 to begin**. Upgrade the chat AI first (~\$20/mo) once it's saving you real hours — it's the highest-ROI subscription in the stack.

Your 30-day action plan

Knowledge without a calendar is entertainment. Print this page, stick it where you work, tick the boxes.

Week 1 — Foundations days 1-7

- ☐ Do the **delegation audit** (Module 1) — know your column-A tasks.
- ☐ Run **P5** to build your voice guide; save it to your Prompt Vault note.
- ☐ Run **P6** on your niche — write down the 3 pain points everything will target.
- ☐ Rewrite one old post using **C.R.A.F.T.** + **P10** and feel the difference.

Week 2 — First engine run days 8-14

- ☐ Sunday: pick a pillar idea, record 5 messy minutes, run the prompts (90 min max).
- ☐ Publish every day Mon–Fri following the Module 4 schedule.
- ☐ Saturday: reply to every comment and DM personally.

Week 3 — Engine + iteration days 15-21

- ☐ Run the engine again with a new pillar idea.
- ☐ Check your numbers once: double down on the best format, drop the worst.
- ☐ Save every prompt that worked into your Vault, filled in.

Week 4 — Monetization groundwork days 22-30

- ☐ Pick **one** path from Module 5 (just one).
- ☐ Take its "first step" this week — samples pitched, freebie offered, or product shortlisted.
- ☐ Run the engine a third time. Three weeks in, it should feel routine.
- ☐ Day 30: review — hours saved, content shipped, first money conversation started?

The only metric that matters this month is consistency. Three full engine runs beats one viral post — you're building a machine, not buying a lottery ticket.

That's the whole course. Every framework, every prompt, every play — **nothing held back.**

Most people will read this, feel productive, and change nothing. The booklet was free either way — but the **value** only exists if you execute. You're one delegation audit, one C.R.A.F.T. prompt, and one Sunday batch session away from being ahead of 95% of people talking about AI.

If this was worth even \$50 to you (let alone \$500)

- **Send it to one person** who keeps saying they "should really figure out AI."
- **Start week 1 today** — the delegation audit takes ten minutes.
- **Follow along** for the advanced material this booklet sets up.

~~\$500~~**FREE**

AND IT STAYS FREE —
THAT WAS THE WHOLE
POINT

The stated value reflects typical pricing of comparable paid courses and coaching covering the same material; it is a marketing comparison, not an appraisal. Nothing in this booklet is financial advice, and no income outcome is guaranteed — results depend on your effort, niche and consistency. AI tools mentioned are examples, not sponsorships; their features and free tiers change often, so check current terms. Always review AI output before publishing: you are responsible for what you ship.
