

THE AI STARTER KIT. FREE, NO FLUFF.

Everything on this page is tested on real work, not theory. It is the same system I use to run my design business and my AI powered Instagram page. Start with the formula, steal the prompts, run the test. Twenty minutes and you are ahead of most people using AI daily.

1. THE THREE PART PROMPT FORMULA

1 Role

Tell it who to be. This sets the quality bar and vocabulary.
You are a pricing coach for freelancers.

2 Task + context

What you need, plus your real situation pasted in. It cannot read your mind.
A client says my quote is double their budget. Here is my service list...

3 Format + rules

The shape of the answer, and your taste.
Three options, plain language, no begging, no dashes.

ALL TOGETHER. COPY THIS SHAPE

You are [role]. [Your situation with real details]. Give me [exact format], [your rules for tone].

Then iterate

The first answer is a draft, not the result. Say what is wrong and ask again. Two rounds of feedback beats one perfect prompt, every time.

2. THE SIX WORDS THAT UNLOCK EVERYTHING

LLM

A program that read most of the internet and learned to predict the next word. The engine inside Claude and ChatGPT. It predicts, it does not know.

Prompt

Whatever you type. A lazy prompt gets the average of the internet. A clear brief gets work you can use. Same as people.

Token

AI reads in chunks of roughly three quarters of a word. All limits are counted in these, and it cannot count its own words while writing.

Context window

The chat's short term memory. When it fills, old details fall out and answers drift. One chat, one job.

Hallucination

A confident answer that is false. Not lying, guessing. Always verify names, numbers, prices and quotes.

Agent

AI that acts instead of just answering: it browses, writes files, runs tools and finishes jobs while you are away. This is where the leverage is.

3. THE HONESTY TEST ALMOST NOBODY RUNS

RUN THIS ON ANY AI BEFORE YOU TRUST IT

What is [a niche fact about your town or industry]? If you are not certain, say so clearly instead of guessing.

An AI that admits uncertainty saves you from embarrassing mistakes. An AI that invents an answer here will invent answers everywhere.

4. FIVE PROMPTS TO STEAL TODAY

THE CLIENT REPLY

You are a pricing coach for freelancers. A client I respect says my quote is above their budget. Write a reply that holds my price, offers a smaller scope instead of a discount, and sounds warm and direct with no begging.

THE INTERVIEW FLIP

Before you answer, ask me five questions that would make your answer better. Then answer using what I tell you.

THE HARSH CRITIC

Here is my work. Be a harsh but fair critic. What is weak, what is missing, and how do I fix each thing? Do not soften it.

THE VOICE LEARNER

Here are three things I wrote. Learn my voice. Now write [the new thing] in that same voice. Do not be generic.

THE BRIEF INTERROGATOR

You are a strategy director. A client gave me this vague brief: [paste it]. Ask the seven questions that would turn this into a real brief, ranked by importance.

Want the daily version?

I post one real AI skill every day, receipts included, on Instagram. And if you need design or an AI setup, bookings are open.
